#### **DETAILED ACTION**

## Response to Arguments

1. In view of newly discovered art, the examiner has withdrawn the finality of the prior office action. Claims 40-47 are allowable, Claims 30-32, and 34-49 are rejected.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 3, 18, 19, 20, 23, 24, 25, 31, 32, 34, 35, and 36 are rejected under 35 U.S.C. 102(b) as being rejected by Derwent Document number 1983-848572 (RD-23619A).
- 4. The adhesion between co-extruded polyester films and ethylene-vinyl alcohol copolymer films is improved with an intermediate bonding layer comprising a blend of ethylene vinyl acetate copolymer (EVA) and ethylene-vinyl alcohol copolymer, or a partially hydrolyzed terpolymer of ethylene, (meth)acrylic acid and vinyl acetate. Pref. in the blend the EVA copolymer is acid-modified and approximately equal proportions of EVA and EVOH polymers are used.
- 5. The adhesive compositions are useful as tie layers in coextruded films and of polyesters such as PET and high barrier EVOH to increase the bond strength between the layers. The products may be in the form of flat film for packaging or e.g. as pipe for the production of

Application/Control Number: 10/712,978

Art Unit: 1773

parisons for blow molding into bottles having good gas barrier properties e.g. for bottling beer.

The adhesive layer does not reduce the mechanical properties of the combined films.

- 6. Regarding claim 36, the breadth of the ratio of the claimed materials is so large that the mere recitation of the material would be sufficient to envisage the materials within the claimed range
- 7. Regarding claims 34+, a bottle or a pipe as taught is an article for fluid transport.

### Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 4, 21, 22, 25-30 and 36-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Derwent Document number 1983-848572 (RD-23619A) as discussed above.
- 10. Regarding claims 4, 21 and 22, it would have been obvious to one having ordinary skill in the art to have varied the thickness of the films depending on the end use and to biaxially orient / heat stabilize them since this is conventionally done to make strong PET packaging films.
- 11. Regarding claim 30, it would have been obvious to one having ordinary skill in the art to have varied the thickness of the adhesive layer depending on the amount of adhesive needed to keep the layers together.

Art Unit: 1773

12. Regarding claim 25, the prior art teaches ethylene vinyl alcohol copolymer and the

applicants claim polyvinyl alcohol. It is the examiners position that one could be used for the

other as being functionally equivalent materials, especially when the resin had low ethylene

content.

13. Regarding claims 26-29, 37-39, surfactants are used in the polymerization of EVA

materials (as stated previously in the last office action), since the polymer is typically

polymerized in aqueous media, it would have been obvious to one having ordinary skill in the art

to have added surfactants for this purpose. One working in the art would be able to choose

appropriate surfactants. The examiner takes the position that surfactants would remain after the

polymer was collected. The same is true for defoamers.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to D. Lawrence Tarazano whose telephone number is (571)-272-

1515. The examiner can normally be reached on 8:30 to 6:00 (off every other Friday).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Carol Chaney can be reached on (571)-272-1284. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.
